## Professional Summary

Accomplished Full Stack Software Engineer with 3 years of experience specializing in developing robust, scalable, and secure web applications that enhance operational efficiency. Adept at leveraging diverse web technologies to build clean, maintainable code, solve complex problems, and collaborate effectively in Agile environments to deliver high-quality software solutions.

## Technical Skills

- \* **Web Technologies (Frontend/Backend/Deployment):** JavaScript (ES6+), TypeScript, HTML5, CSS3, React.js, Next.js, Redux Toolkit, Node.js, Express.js, Django, REST APIs, JWT, Passport.js, Microservices, PostgreSQL, MySQL, MongoDB, Sequelize ORM, Azure Static Web Apps, Vite, Tailwind CSS, MUI v6, Zod, React Hook Form, ApexCharts, i18next
- \* **Tools & Methodologies:** Git, GitHub, Postman, Figma, ESLint, Prettier, Vitest, Agile, Scrum, REST API Design, Code Review, Technical Documentation
- \* **Languages:** Python

## Experience

### Software Engineer

**FastBeetle (Logistics & Delivery Startup)** | Srinagar, India

Aug. 2024 – Apr. 2026

- \* Architected and developed scalable backend **web services** using **Node.js & Express.js** for Rider, Merchant, and Customer **web applications**, ensuring secure real-time transactions via payment gateway integration.
- \* Optimized performance across 5 critical **web dashboards** (Merchant, Admin, Hub, Support, Accounts), reducing average page load time by 70% through advanced query optimization and caching strategies, directly enhancing operational **web** efficiency.
- \* Engineered a **web-based** Bulk Edit PinZone module, automating zone assignments and cutting manual effort by 90%, saving multiple engineer-hours weekly and improving data accuracy for **web**-managed logistics.
- \* Built OrderSnap.in, a full-stack dropshipping **web platform** leveraging **Node.js, Express, React, Redux Toolkit, PostgreSQL & Sequelize**, complete with secure **JWT + Passport.js** authentication for seamless user experience.

### ### Full Stack Developer

**ElySpace (Software Agency)** | Baramulla, India

Aug. 2023 – Jul. 2024

- \* Delivered multiple client **SaaS and e-commerce web projects** using **React, Django, and JavaScript**, ensuring robust **REST API integration** and responsive UI/UX across diverse client requirements.
- \* Owned feature delivery end-to-end within Agile sprints, from requirements gathering and **web development** through to deployment and client handoff, ensuring successful project completion.
- \* Resolved backend bottlenecks and optimized **web deployment pipelines**, maintaining high availability and performance across concurrent production environments for client **web applications**.

### ### Full Stack Intern

**Yarikul Infotech** | Srinagar, India

Mar. 2023 – May 2023

- \* Developed a real-time matrimonial **web platform** using **Django & Python** with live chat functionality, enhancing user engagement by 20% through interactive **web features**.
- \* Created custom **WordPress plugins** and a **Python-based utility**, expanding the company's product offerings and demonstrating versatility in **web-related tool development**.

## Education

**University of Kashmir Srinagar, J&K, India**

B.Tech in Mechanical Engineering | Aug. 2019 – Dec. 2023

## Projects

### Remote Job Agent | Python, CrewAI, Gemini 2.0 Flash, APScheduler, FPDF | GitHub

Aug. 2024 – Present

- \* Engineered an end-to-end 3-agent AI automation system (Scraper → Curator → Cover Letter) using CrewAI 0.5.0; scrapes 15+ job boards, ranks by quality, uploads to Google Sheets, and generates AI-powered cover letter PDFs — runs hands-free every Mon & Thu via APScheduler.
- \* Designed a 7-point quality scoring algorithm and URL deduplication engine; integrated Google Sheets API with batch processing and Gemini 2.0 Flash LLM with API retry resilience for personalized cover letter generation.

### CRM Application | Django, MySQL | GitHub

2023

- \* Built a customer relationship management system with reporting dashboards, contact management, and analytics to support business decision-making.

### Music Controller | React, Django, Spotify API | GitHub

2023

- \* Collaborative real-time playlist voting app integrating the Spotify API; enabled group music sessions with democratic queue management.
