

Cover Letter: Tier III Service Desk Engineer

My excitement soared discovering the Tier III Service Desk Engineer position at Unio Digital. Your commitment to comprehensive managed services, from IT to security, resonates with my passion for ensuring robust, seamless technology solutions.

As a Software Engineer at FastBeetle, I thrived on dissecting complex systems, optimizing performance, and building clean, maintainable code. This experience honed my diagnostic capabilities and my knack for pinpointing issues quickly – skills I believe are crucial for a Tier III role. I've extensively utilized **REST APIs** for system integration and troubleshooting, and leveraged **Git/GitHub** for managing development workflows and version control, both critical for maintaining operational excellence.

I'm eager to bring my problem-solving mindset and dedication to collaborative, high-standard work to Unio Digital. The opportunity to contribute to your diverse service offerings and directly impact client success truly excites me.
